

## Notice to the Customers of New London Water Utility

Water main flushing and fire hydrant inspections will continue for the next 2 months. Fire hydrant inspections assure fire hydrants will function properly when called upon in an emergency. Water main flushing improves water quality by removing sediment that can accumulate in the water main through time. Veolia Water, the contract operator of the New London Water Utility, will be flushing and inspecting hydrants throughout the distribution system during the months of May & June. Beware of utility workers flowing fire hydrants and working along the roadways. Signs will be placed along the roads in active flushing areas.

During the months of May & June, crews will be flushing areas in the city of New London.

Flushing will be conducted during the day and at night throughout the system. As a result of this procedure, some customers may notice discoloration in the water and/ or lower than normal water pressure.

If discoloration occurs, run the cold water for 5 to 10 minutes. If the water does not clear up, turn off the water for 10-20 minutes and try the procedure again. If the problem persists, customers should call the office 860- 447-5222 during regular business hours, 8:30 A.M. until 4:00 P.M.
